Wu Wenjie

Target Role: Full Stack Engineer — AI Internal Systems

Phone: +86 18268849018 | Email: wuwenjie0506@163.com

Professional Summary

AI-focused Full Stack Engineer with 13+ years building large-scale, high-QPS application systems and, most recently, leading AI technology adoption into the data domain. I take AI-driven systems from concept to production: I led the build of a **Data Expert Agent** that combines skills with retrieval-augmented generation (RAG) to improve users' data development and stability assurance, and extended this platform to empower the LLM training-data team, measurably improving the company's LLM training efficiency. I combine deep data/Agentic engineering with end-to-end full-stack delivery and strong cross-functional communication, and I thrive on owning ambiguous problems in fast-moving environments.

Core Competencies

- **AI & Agentic Systems**: Agentic AI workflows, AI agents (skills + RAG), Data Expert Agent, LLM training-data pipelines, data curation & quality, data lineage, AI data processing, intelligent workflow automation, prompt/tool orchestration
- **Full-Stack Engineering**: front-end + back-end full-stack development, microservices, REST APIs, Spring/Spring Cloud, API Gateway, database/table sharding, message middleware
- **Data & Infrastructure**: Hadoop, Spark, HBase, Kafka, Flink, Airflow, Kubernetes/Docker, ETL/OLAP, cloud infrastructure, high-QPS distributed systems
- **Engineering Practices**: ownership of ambiguous problems, product-to-technical translation, agile/Scrum, DevOps/CI-CD, cross-functional communication

Work Experience

Ant Group — Data Stability Assurance Expert (Led AI Adoption in the Data Domain) · 2024.11 – present

- Led the introduction of AI technology into the data domain: built a **Data Expert Agent** that combines skills with retrieval-augmented generation (RAG) to assist users' data development and stability assurance — delivering diagnosis, real-time risk identification, and self-healing across company-wide data baselines (cutting annual risk incidents by 60,000 and reducing night-time on-call from 10+ to 3 per night).
- Extended this platform to empower the **LLM training-data team**, improving the company's LLM training efficiency through real-time + offline data lineage, curation, and quality assurance.
- Authored data-baseline specifications, whitepaper, entry/exit criteria, and GOC emergency standards — translating stability pain points into pragmatic AI solutions.
- Owned delivery from idea generation to deployment and iteration: dual-link assurance, data-center-level drills, and engine HA governance (Lindorm isolation, Light HA migration, SLS cloud migration, Flink upgrades).

Mashang Consumer Finance — Senior Big Data Architect · 2024.05 – 2024.10

- Owned the architecture, capability building, and operations of the data development platform; unified multiple data applications to improve the developer experience — building internal tools that automate data workflows.

Shanghai Yingxinhui — Staff Engineer · 2023.09 – 2024.03

- Full-stack Web middle/back office: streamlined the trade price data flow using Kafka, xxl-job, and offline processing; decoupled business from offline processing to support trade price queries and downstream handling.

Shanghai Botong — Architect · 2021.09 – 2023.08

- Built a big data query platform **from scratch** (query, security, watermarking, and log-monitoring modules) with a multi-tenant, multi-site architecture.
- Upgraded and unified the One-stop middle platform: real-time + offline query, Airflow ETL scheduling, and data security.
- Designed and implemented **Databike** for synchronous/asynchronous querying via a FaaS approach, serving high-QPS multi-tenant scenarios.
- Cut download time from 30 minutes to under 5 seconds, saving ~$100K/month; delivered an Open Data Center with configurable, high-QPS user data pre-processing and aggregation.

Didi Chuxing — Expert Engineer · 2018.01 – 2021.08

Built **Data Dream Factory**, an end-to-end data development and operations platform suite:

- **Data Development**: online intelligent development platform covering the full ETL lifecycle — multi-type task development (Shell, Hive, Spark, MapReduce), visual table creation, and submit/test/release of files and functions; dev/prod environment separation with a submit-&-release workflow for engineered management; integrated data test-runs, data quality, monitoring/alerting, plus rapid OLAP query.
- **Scheduling System**: event-driven intelligent task-scheduling engine with baseline-based priority orchestration to improve assurance of data warehouse and core pipelines; led multiple refactorings (resource isolation, data quality, monitoring/alerting, strong/weak dependencies, DAG/Flow, internationalization); abstracted task execution into an offline engine on K8s/Docker with multi-dimensional monitoring and intelligent auto-scaling.
- **Data Quality**: table-, field-, and SQL-based rule validation with monitoring and subscription; strong rules trip the circuit breaker, weak rules only alert.
- **Monitoring & Alerting**: monitored data production correctness and timeliness (task errors, quality errors, delays, baseline alerts) with rule-based alerting by baseline & task priority.
- **Project Management**: tenant- and project-level data asset governance (Gateway queue, YARN queue, permissions, databases/tables/HDFS) with RBAC and role-based approval flows; designed HDFS storage and dev/prod separation rules.

Cainiao Network — Senior Development Engineer · 2016.01 – 2017.12

- Application architect for Cainiao Cloud Printing; led Double 11 stability assurance and high-traffic support; managed ISV integration and BD & operations.

Taobao — Development Engineer · 2012.04 – 2015.12

- Developed and maintained the data application platform (module development, business refactoring, permission management); contributed to the 1688 data warehouse (migration, ETL, model optimization) and data products.

Education

Period	University	Major	Degree
2009.09 – 2012.03	Huazhong University of Science and Technology	Computer Applied Technology	Master of Engineering
2005.09 – 2009.06	Changsha University of Science and Technology	Civil Engineering (Road Engineering)	Bachelor of Engineering
